

BMMS-Current-State-Architecture

BMMS Current State Architecture

Board Minutes and Management Software (BMMS)

Version: Legacy Recovery Baseline Document Version: 1.1 (merge-conflict resolved) Date: 2026-10-02

Repository Information

Field	Value
Repository Name	BMMS-Legacy
Repository Type	Legacy Recovery and Modernization Repository
Git Hosting	GitHub
Development Repository Location	C:\Repository\BMMS-Legacy
Primary Development Branch	modernization
Protected Branch	master
Baseline Tag	BMMS-Recovered-Baseline

Repository Purpose - Preserve the recovered legacy application - Support modernization activities - Maintain architecture documentation - Track dependency remediation - Support API migration - Support React modernization

Runtime Environment (Recovery Baseline)

Field	Value
Location	C:\BMMS\BMMS\Source
Purpose	Stable recovered application; functional validation; regression testing; baseline comparison; production-like recovery validation environment; rollback reference
Status	✔ Operational

Rules - No development changes - No modernization changes - Used only for validation - Used as rollback reference

Modernization Working Environment

Field	Value
Location	C:\Repository\BMMS-Legacy
Branch	modernization
Status	✔ Active Development Environment

Purpose - Dependency replacement - Framework modernization / stabilization - API development / extraction - React UI migration - Cloud migration preparation / readiness improvements - Auth modernization

Branch Governance

Branch	Policy
master	Recovery baseline. No direct changes. Emergency fixes only. Active development. All modernization work,

modernization

refactoring, architecture improvements.

Planned future branches - feature/dependency-cleanup - feature/aspnet-core-api - feature/react-ui - feature/auth-modernization - feature/cloud-migration

Modernization Program Status

Phase	Description	Status
0	Legacy Recovery	✔ Complete
1	Stabilization & Inventory	✔ Active
2	Dependency Removal	⌘ Planned
3	API Layer	⌘ Planned
4	React UI	⌘ Planned
5	Security Modernization	⌘ Planned
6	Cloud Migration	⌘ Planned

Phase 0 — Activities Completed - SQL Server installation - BMMS database restoration - Application recovery - Visual Studio compatibility fixes - Runtime validation - Successful login verification - GitHub repository creation

Governance Preservation Policy

The following workflows are preserved and must not be functionally altered during modernization — modernization changes the implementation, not the governance behavior:

- Committee Management
- Committee Member Tagging
- Meeting Management
- Agenda Workflow
- Agenda Approval
- Agenda Finalization
- Attendance
- Minutes Workflow
- Action Item Workflow
- Audit Trail
- Reporting

All modernization efforts must maintain behavioral parity with the recovered BMMS application.

Recovery Validation Status

Check	Status
Application Builds	✔
SQL Server Connected	✔
Database Restored	✔
Login Page Displays	✔
Authentication Works	✔
Dashboard Accessible	✔
Core Workflows Available	✔
Source Control	✔
Modernization Readiness	✔ Approved

Overall status: Production-Like Legacy Baseline Established

Document Control

Field	Value
Document Owner	Ganesh Shankar
Repository	BMMS-Legacy
Active Branch	modernization
Modernization Program	BMMS Transformation Program
Current Sprint	Sprint 1 - Dependency Stabilization & Inventory
Document Status	Approved Baseline Architecture
